Time and efficiency

Cut costs and meet your deadline with our high-performance CASE workbenches.

Data quality and validation of the new system

Data quality is essential. That is why we make sure that your data meet the requirements of your new system.

Detected malfunctions are corrected by special migration rules or transmitted to users for manual correction. We regularly assess and examine the quality of the data during the project. We produce functional syntheses comparing the results of the major corrections on the former and the new system. Possible discrepancies are inquired about and justified to deliver a fully operational system as quickly as possible.

Data deduplication and address standardization

Our CASE workbench supports identifying and merging duplicates: it includes advanced **deduplication functions** based on phonetic algorithms. We also **standardize** addresses on the basis of the postal addresses repository.

Migration rules repository and generation of data migration process

We put our software workbench at your disposal. They fully automate the process:

- Viewing and analyzing source data
- Specifying and sharing migration or merging rules
- Generating migration programmes
- Issuing functional control reports

High-performance migration chains

We guarantee maximum performance to go live over the week-end. Our code is 7 to 10 times faster than SQL or ETLs.

Functional expertise

We provide data migration expertise during the process and a strong added value in bank and insurance companies data migration.

Revolutionize your IT with Move Solutions

History and positioning

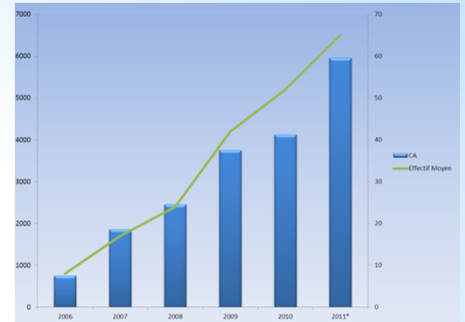

Our company was created in 2005 by experts in system and data migration. It has enjoyed a strong yet controlled growth thanks to refined processes.

Since the very beginning, we have been investing a significant part of our revenues in R&D. And today, we offer the most modern and competitive technology on the market.

We usually work on fixed-price projects running over several years with a commitment to results.

Most of our projects run over 2000 days and are critical for our customers. We have a real know-how in managing large-scale, fixed-price projects.

At the end of 2011, we had a full order book until 2014.

Turnover and staff growth

Our offers

Data migration

Slash costs and meet your schedule with our high performance CASE workbenches. We are well-acquainted with your line of business thanks to our functional expertise in banking, insurance management, pension plans and mass retail.

Data quality management

Our CASE workbenches include data cleansing, standardization and deduplication functions.

Functional parity conversion

We use our CASE workbenches to transfer you applications to a new platform. The operation is almost completely automated.

IT system upgrade

We work to achieve a target architecture with maximum maintenance capabilities. Our unique approach is cost-effective and improves time and delivery, especially from client/server legacy (NSDK, PowerBuilder, etc.) to java or .net targets.

IT strategy planning

IT system design, deconstruction —i.e. creating independent applications, reverse documentation, measuring the quality of the code

Special maintenance

We automate complex maintenance —data structure expansion, utility replacement, change of DBMS, etc.

Application management

Our CASE workbenches reduce iterative maintenance costs thanks to legacy analysis and diagnosis functions. Impacts of changes are available immediately and enable you to complete regression testing quickly.
